Design and Analysis of Cluster Randomization Trials in Health Research (Hodder Arnold Publication)

Allan Donner, Neil Klar

A cluster randomization trial is one in which intact social units, or clusters of individuals, are randomized to different intervention groups. Trials randomizing clusters have become particularly widespread in the evaluation of non-therapeutic interventions, including lifestyle modification, educational programs and innovations in the provision of health care. The units of randomization in such studies are diverse, ranging from relatively small clusters such as families or households, to entire neighborhoods or communities, but also encompassing workplaces, hospital wards, classrooms and medical practices. The increasing popularity of this design among health researchers over the past two decades has led to an extensive body of methodology on the subject. This book is the first to present a systematic and unified treatment of this topic; it contains distinctive chapters on the history of cluster randomized trials, ethical issues, meta-analysis and guidelines. Written by two of the leading authorities in the field, this book is an essential reference text for investigators in the planning or analysis stages of a study. It is also highly suitable for use as a textbook in a graduate-level course in research methodology, and is aimed at biostatisticians, epidemiologists, health service researchers and public health professionals.

From reader reviews:

Charles Tebo:

This book untitled Design and Analysis of Cluster Randomization Trials in Health Research (Hodder Arnold Publication) to be one of several books which best seller in this year, that is because when you read this book you can get a lot of benefit into it. You will easily to buy that book in the book retail store or you can order it by means of online. The publisher with this book sells the e-book too. It makes you quickly to read this book, as you can read this book in your Mobile phone. So there is no reason for you to past this e-book from your list.

Earnest Moss:

A lot of people always spent their very own free time to vacation or perhaps go to the outside with them family or their friend. Did you know? Many a lot of people spent that they free time just watching TV, or perhaps playing video games all day long. If you would like try to find a new activity that is look different you can read the book. It is really fun to suit your needs. If you enjoy the book that you read you can spent the whole day to reading a guide. The book Design and Analysis of Cluster Randomization Trials in Health Research (Hodder Arnold Publication) it is quite good to read. There are a lot of those who recommended this book. We were holding enjoying reading this book. In the event you did not have enough space to develop this book you can buy the e-book. You can m0ore simply to read this book out of your smart phone. The price is not too expensive but this book offers high quality.

Amy Tharp:

Do you have something that you prefer such as book? The e-book lovers usually prefer to decide on book like comic, short story and the biggest an example may be novel. Now, why not attempting Design and Analysis of Cluster Randomization Trials in Health Research (Hodder Arnold Publication) that give your pleasure preference will be satisfied through reading this book. Reading addiction all over the world can be said as the means for people to know world a great deal better then how they react toward the world. It can't be stated constantly that reading routine only for the geeky man but for all of you who wants to end up being success person. So , for all you who want to start studying as your good habit, you could pick Design and Analysis of Cluster Randomization Trials in Health Research (Hodder Arnold Publication) become your own personal starter.

Delbert Storey:

As a student exactly feel bored to help reading. If their teacher inquired them to go to the library as well as to make summary for some publication, they are complained. Just tiny students that has reading's heart and soul or real their interest. They just do what the professor want, like asked to the library. They go to generally there but nothing reading very seriously. Any students feel that reading through is not important, boring in addition to can't see colorful photos on there. Yeah, it is being complicated. Book is very important for

yourself. As we know that on this era, many ways to get whatever we want. Likewise word says, many ways to reach Chinese's country. Therefore , this Design and Analysis of Cluster Randomization Trials in Health Research (Hodder Arnold Publication) can make you truly feel more interested to read.
